Mandatory Requirements for CLIN001A

- Intel Pro 100+ Management Adaptor (**Amended 6/23/1999**)
- Matrox Millenium AGP Video Accelerator Adapter – 1600 x 1200
- Pentium II Motherboard with Intel 440BX Chipset including the Intel 82443BX Chipset Accelerated Graphics Port (AGP) (**Amended 6/11/1999**)

¹ Mandatory Brand Name items are specified due to the Patent and Trademark campus networked operating environment. Because of the manner that the PTO deploys software updates, new packages, and deletions campus wide to all workstations certain variables must be controlled. Also, because of some software hard coding to existing network devices or server based applications changes must be strictly monitored. To severely limit any changes to driver(s) or coding that would be required by changing the referenced item, the brand specificity will be strictly adhered to.

² Brand name or Equal items will be considered by comparing the commercial specification sheets. Only those items that meet or exceed the specifications for the line item (including all components) listed in the CLIN list will be considered. Vendor specific software applications will not be evaluated. (**Amended 5/26/1999**)

Note: All hardware, software, and firmware provided under this contract shall be commercially available, off-the-shelf (COTS), and in current production. This means that items offered by the Contractor have been: (1) formally announced for marketing purposes on or before the closing date of this Project Agreement, (2) may be demonstrated during evaluation of proposals to validate that the items meet the requirements of this specification (brand name or equivalent as specified on CLIN list), and (3) can be provided according to the delivery requirements of this Project Agreement and the resulting contract.
